### Helping more than 700 cities, municipalities and governments agencies manage their work

Bylaw, Permits and City Works Platform automates the creation, issuance, and tracking of municipalities' activities. It further empowers workforces by providing remote access across devices so officers can complete information in a timely manner. We customize our platform to meet your particular business process requirements including government permitting, building inspections, code enforcement functions, licensing, planning and zoning.

### Features

#### Streamline and Automate Processes

- Provide central access to permits, code enforcement, and zoning data
- Build custom processing rules and task-streamlining work flows
- Automate planning, assigning, scheduling, and routing tasks
- Prepare plan reviews
- Auto-populate documents with case details
- View property and case histories
- Allow staff access of case information in the field
- Administer inspections on mobile devices

#### Manage, Review and Improve Processes

- Manage centrally by department - or manage across all departments
- Monitor time per activity; highlight problems and best practices
- Create scheduled, on-demand and custom reports

#### Create Status Portals for Citizens and Contractors

- Frame easy-to-use web portal to your website
- Offer citizen and contractor 24/7 access and status updates
- Integrate portals with GIS, property address, and contractor databases

#### Keep Citizens and Contractors Informed

- Display a growing knowledgebase of information
- Track, display and promote top questions
- Allow detailed filtered information search for citizens or contractors
- Use knowledgebase technology to train new officers
- Allow managers to create and publish information easily to the website
- Auto-send real-time information updates to citizens

#### Deploy A Secure Data System

- Allow managers to set multi-security levels within departments
- Export information to external systems while maintaining data integrity
- Deliver within a single-tenant database architecture for optimum security
- Operate in highly secure, top-tier datacenters with daily backups
